

MARINE SAFETY FLOTATION BODY ARMOR

The 4300 Marine Safety Flotation Body Armor is a product designed by PSP and Mustang Survival Canada. Marine SAfety Flotation Body Armor provides excellent protection with a ballistic vest that can be worn alone or combined with the MSV 971 Marine Survival Vest which provides shear survival load carriage capabilities and a CO2 inflatable flotation collar. The flotation vest is attached with a two-point zipper system, allowing the two vests to seamlessly integrate from two separate systems in to one flotation/ballistic protection system.

- **Front entry design makes the vest easy to put on and remove**
- **Detachable flotation collar allows the vest to be worn alone for ballistic protection or in combination for flotation capabilities**
- **NOMEX® flame resistant fabric with Neoprene coating is abrasion resistant and helps protect against exposure to fire hazard**
- **Add 10X12 hard armor plates in the front and rear pockets for protection from high velocity ballistic threats**
- **Drainage grommets reduce water retention if submerged**
